

Please read operating-instruction carefully! Prior to first use clean your siphon as described under "Cleaning Instructions".

Please read the instructions thoroughly before using for the first time!

Instructions for Use

1. Unscrew the head from the bottle and rinse with warm water before first-time use.
2. Insert the measuring tube (a) firmly into the bottle. Then fill the soda siphon with cold water only. The colder the water, the more sparkling is your soda water.
3. Insert the ascending tube with seal (b) into the bottle through the measuring tube.
4. Place the siphon head into position and screw it on until the threading of the bottle is no longer visible.
5. Insert the gold-coloured iSi CO₂ soda charger into the charger holder. For guaranteed quality use original iSi soda chargers only.
6. Screw the charger with the charger holder onto the siphon head until gas can be heard releasing into the bottle. **Shake the bottle vigorously several times** and then unscrew the charger together with the charger holder. Place the protective cap onto the threading.
7. To obtain soda water, press the lever down gently. Direct the jet of water at the inside wall of the glass.

Before unscrewing the siphon head, press down the lever until no more water or gas comes out.

Important Directions

Mind the following important points:

- Never fill the bottle without the measuring tube being inserted. The measuring tube must fit tightly in the neck of the bottle – it must seal flat with the threading and must not rise above the bottle's neck. The bottle is full once the water starts to spill over at the measuring tube. Do not try and fill in more water by tilting or shaking the bottle.
- If not using the siphon for a significant period of time store the bottle with the head removed.
- If the bottle has not been used for a certain amount of time, it is important to rinse it out with warm water before use. Also press down the siphon lever several times in order to check the functionality.
- When used normally as specified, with pure water, the siphon should not require frequent cleaning. The inside of the bottle is coated with an easy-clean surface. Do not use any sharp utensils for cleaning. Do not put the siphon into the dishwasher and do not boil!
- The siphon can be placed only in the refrigerator but never in the deep-freezer or freezer compartment.
- Always take the empty charger out of the charger holder right after release of the gas and shaking. Avoid direct irradiation of chargers by the sun, and other conditions that may lead to heating over 50 °C (= 122 °F).
- Never unscrew the head from the bottle if the unit is still under pressure. Always press the dispensing lever until all pressure is completely released.
- If necessary dismantle the bottle only into the parts illustrated in the drawing (SPARE PARTS).
- Order spare parts through your specialist dealer or directly from iSi.
- **Use original iSi parts only. Use iSi siphon heads only with iSi siphons. iSi heads are marked iSi on the head and iSi bottles on the bottom. Never combine or use any other manufacturer's product with iSi products.**

- Do not attempt to modify the siphon.

- For repairs, always return the entire unit (head plus bottle).

Cleaning Instructions

Follow steps 1, 2 and 3 to clean your iSi Soda Siphon (CLEANING). The siphon should be cleaned as follows before using it for the first time and periodically thereafter:

1. Unscrew the head from the bottle after emptying completely. Remove the ascending tube.
2. Remove the measuring tube as shown.
3. Just rinse well with clear water. Do not place in the dishwasher and do not boil. After cleaning replace measuring tube immediately.

Safety Instructions

For the chargers, pertinent safety instructions are given on the package. The empty charger should never remain on the head and should be taken out of the charger holder after release of the gas and then discarded.

iSi siphons are pressure containers requiring special safety precautions. Do not use units that are damaged. Units that have been dropped should be checked by iSi before resuming use. Bottles and chargers should be kept out of the reach of children.

Do not lean over the unit when screwing in chargers! Do not cross-thread the head when screwing it onto the bottle.

Do not use the dispensing lever as a carrying handle or pull on the lever when unscrewing the head.

Never use excessive force when handling the siphon.

Please be advised that tampering with the siphon and/or its components voids any and all warranties of the manufacturer/supplier. Keep these instructions for later reference to avoid improper handling or operating. This siphon is designed exclusively for the purposes specified in the instructions for use. Even if manufacturers of similar products should specify other possible applications, they do not apply to our product.
